In the Claims

Claims 1-21 have been canceled.

22. (Previously amended) An empty syringe and a pre-filled syringe, the syringes respectively comprising

5 a body having a closed forward end having a nozzle and an open rearward end, the body of each syringe having a common diameter, and including structure mountable in a common injector,

a plunger located within said body,

said empty syringe having a first capacity,

10 said prefilled syringe being prefilled to capacity with an amount of fluid different than said first capacity, and

physical indicia interacting with said common injector on one said syringe indicating information related to  
15 the capacity of said syringe.

23. (Previously amended) The empty and pre-filled syringes of claim 22 wherein said physical indicia represents the length of an extender which is attached to said plunger within said prefilled syringe.

L-F/104H

24. (Previously amended ) An empty syringe and a prefilled syringe, the syringes respectively comprising:

a body having a closed forward end having a nozzle and an open rearward end, the body of each syringe having a common diameter, and including structure mountable in a common injector,

a plunger located within said body,  
said empty syringe having a first capacity,  
said prefilled syringe being prefilled to capacity  
with an amount of fluid different than said first capacity,  
and

physical indicia interacting with said common injector on one said syringe indicating information related to the distance of the plunger from an end of said syringe when said syringe is initially installed on an injector.

25. (Previously amended) The empty and pre-filled syringes of claim 24 wherein said physical indicia represents the length of an extender which is attached to said plunger within said prefilled syringe.

26. (Previously amended) An empty syringe and a pre-filled syringe, the syringes respectively comprising

a body having a closed forward end having a nozzle and an open rearward end, the body of each syringe having a common diameter, and including structure mountable in a common injector,

5 a plunger located within said body,  
said empty syringe having a first capacity,  
said pre-filled syringe being pre-filled with an  
10 amount of fluid different than said first capacity, and  
physical indicia interacting with said common  
injector on said pre-filled syringe indicating information  
related to the amount of fluid pre-filled in the pre-filled  
syringe.

27. (Previously amended) The empty and pre-filled syringes of claim 26 wherein said physical indicia represents the length of an extender which is attached to said plunger within said pre-filled syringe.

28. (Previously amended) An empty syringe and a pre-filled syringe, the syringes respectively comprising

a body having a closed forward end having a nozzle and an open rearward end, the body of each syringe having a

L-F/104H

5 common diameter, and including structure mountable in a common injector,

a plunger located within said body,

the empty syringe having a first capacity,

said pre-filled syringe being prefilled with an

10 amount of fluid different than said first capacity, and

physical indicia interacting with said common

injector on one said syringe indicating information related to

the end of travel position of an injector ram coupled to the

plunger when the syringe is coupled to an injector.

29. (Previously amended) The empty and pre-filled syringes of claim 28 wherein said physical indicia represents the length of an extender which is attached to said plunger within said pre-filled syringe.

30. (Previously amended) An empty syringe and a pre-filled syringe, the syringes respectively comprising

a body having a closed forward end having a nozzle

and an open rearward end, the body of each syringe having a

5 common diameter, and including structure mountable in a common injector,

a plunger located within said body,

09/307,633

L-F/104H

10 said empty syringe having a first capacity,  
said prefilled syringe being pre-filled with an  
amount of fluid different than said first capacity, and  
physical indicia interacting with said common  
injector on one said syringe indicating information related to  
the range of travel of an injector ram coupled to the plunger  
when the syringe is coupled to an injector.

31. (Previously Amended) The empty and pre-  
filled syringes of claim 30 wherein said physical indicia  
represents the length of an extender which is attached to said  
plunger within said syringe
